It's 2475. The Civil War was centuries in the past. Most of the world's population is under the rule of the a dominant order, The United States of America, or as they call it "The States" as we call it "America". Of course, there is civil unrest in the US. The North is a conglomeration of, well, the North, which is by far the larger portion of the States. The south is a mix of, a mix of racial oppression, which is common in the U.S. In the South the Republican party holds a strong grasp of power, ruling over the Democrats with an iron fist. In the North, the Democrats hold the majority, but are just as oppressive. Corruption and greed rule the states at all levels, and it's causing the populations to riot against each other. Meanwhile, a group of shadowy operatives using covert operations and mysterious assassins are trying to bring back, what the people in the U.S. call "The Old World Order" which consisted of the United States and all of the other countries that were in control before the collapse of the world in 2466. The time has come for the people to rise up and bring justice to those who have oppressed them. The protagonist is a young girl. She is pregnant, and since there is no abortion in the United States, she has no choice but to carry the baby to term. Her fate rests in the hands of the four candidates vying for the position of President of the United States.

Brain-derived neurotrophic factor protein levels in the prefrontal cortex of patients with bipolar disorder. Bipolar disorder is associated with a high rate of mortality. However, no biological markers have been identified to predict outcome in bipolar disorder. Brain-derived neurotrophic factor (BDNF) has been implicated in the pathophysiology and treatment of bipolar disorder. This study investigated whether BDNF protein levels are altered in the prefrontal cortex of patients with bipolar disorder. Nineteen patients with bipolar disorder and 18 healthy control subjects were enrolled in the study. Patients were euthymic and drug-naive at the time of the study. After collecting blood samples, brain tissue samples were collected from both patients and control subjects during neurosurgery. BDNF protein levels in the prefrontal cortex were determined by Western blotting, and serum levels of BDNF were measured by ELISA. There was a significant negative correlation between serum and cortical BDNF protein levels in patients ( $r = -0.47$ ,  $P = 0.025$ ). 82157476af
